Master Data Management

Enterprise Data Management for Cloud and Hybrid Environments

Datalynx DMS supports System Integrators, Data Management Services Providers, Platform & Application Vendors and enterprises with in-house technical teams to effectively utilise data assets to drive business outcomes.

DMS is the world's most versatile data management solutions platform, combining all the capabilities required to successfully undertake the most complex data initiatives via one comprehensive, highly-integrated product suite.

Offering high productivity and efficiency, the DMS incorporates a broad range of productised and highly integrated capabilities that combine to deliver sophisticated business solutions.

This single platform is a unique "one-stop" technology that replaces the numerous disparate systems offered by some vendors. Migrate to the cloud, rapidly deploy a Data Analytics Repository, modernise legacy data platforms and create a single source of truth for customer data.

Datalynx DMS operates within and across conventional, Cloud and hybrid environments, offering unparalleled flexibility to work with data wherever it resides.

Datalynx supports a global network of partners that utilise the DMS Platform to deliver exceptional outcomes for clients all over the world.

The DMS Platform is available to technology vendors, services providers and end-user technical teams via a flexible licensing model, including end-user perpetual licences, SaaS subscriptions and services partner software leases.
